Stock Tracking Project

Purpose:

Our stock tracking project is prepared for functions such as buying, selling and controlling the number of products in the storage.

Stories:

Roles: Salesperson, Storageperson, Ceo

Storageperson “Storage Product” Story: The products in the storage are monitored and the missing products are supplied and added to the storage. (Priority=High).

Ceo “Price Entry” Story: Supplied products are controlled and price entry is provided to the system. If needed, the price list can be updated. (Priority=High)

Salesperson “Place Order” Story: Customers arrives at the checkout with items to be purchased. The salesperson uses the system software to record every item purchased. (Priority=High)

Salesperson “Supply Customer Data” Story: Salespeson provides "running total" and "line item" details with the help of the application. (Priority=High)

Salesperson “Arrange Payment” Story: Different discount rates are applied depending on the payment method. (Priority=High)

Salesperson “Establish Payment” Story: Customers pay the method they choose. A receipt is printed by the salesperson when the sales process is completed. (Priority=High).

Ceo “Check Status” Story: The CEO can check past transactions at any time. (Priority=High)
